

## Guide For ref

This file is a step by step model for a referee to prepare and organize a game in the field. The text in the quote mark is the speech. This is just a guide and there is no need to follow with 100% accuracy though the following the order of the steps is highly recommended.

【Before the players arrive, set the equipments on a longtable or lawn in ordered fashion according to the number written on each equipment. Then divide the equipments equally into two groups or according to costumers' request. The default of the central remote set the team with samller numbers ( for example, from equipment #1 to #6 if you have 12 total players and devided them equally ) red and the other team blue 】

“Hi, guys, nice to meet your all. I'm very glad that you are interested in our Game. Now I will show your how to use our “weapon” and how to “fight”.

【Now, ask people to divide into two teams , and then ask them to stand in two lines , facing each other 】

“First, please take a look at this package. This is a set of equipment for one person, which includes a helmet and a vest. We also have laser guns in that bigger package. We will deal with it later. Now I will show you how to put the vest and helmet on, everybody, please pay attention and look at me carefully.”

**【Open the package and take the equipment out】**

“First, put the helmet on, use this to control size.”

“Second, put the vest on, make sure this Antenna is at back and pointing toward the sky.”

“Adjust the velcros to make yourself comfortable.”

**【Put the vest and helmet on】**

“Now everyone, please put your gear on.”

**【check everyone, make sure all of them are fine, pass the wire that connects the laser gun to them and ask them to hold it】**

“Now, let’s armed. Plug the data cable which I just gave you in when you get the laser gun, I will show you how and where.”

**【Take a laser gun out, and plug data cable in】**

**【open the gun-package, pass the laser gun to everyone】**

“Now, please stay where you are. I will turn your equipment on one by one”.

**【Feel the switch, then use your fingernail to press it down.】**

“Now it is on, but the equipment isn’t activated yet. It will hold the state “ready to go” unless I give you the signal of “battle begin”

“Our gun has 1200 ft shooting range. As far as you can see the target you can get it. Of course, you must aim at it first.”

“You must shoot the head or upper half of the body, because that’s where the laser sensors are. If you want to get someone, you must aim at the area near the laser sensor. Shooting at the legs will be useless.”

“Thick leaves and grass can make the laser weaker, so if you want to get a target behind those things, you’d better make a running fire.”

“Now, let’s we do some practice one by one. Everybody put your gun down, follow my order.”

**【Check the condition, active】**

“Have you felt 2 vibrations just behind your right shoulder? This is the signal for the start of a game. ”

“The first thing your need to do will be loading ammo. Please do not move. Please look at me. Actually, it’s really easy. Just point the gun toward the sky.”

“Can you hear that?”

“Now let’s hear the shooting noise.”

“Once loaded, one magazine contains 50 bullets.”

“This sound indicates out of bullets.”

“Now, Reload. By the way, you can do this at anytime.”

“Now everyone, loading please. But do not shoot.”

“If you get someone, there will be a vibration just behind your right shoulder, just one brief vibration. And you will score one point.”

“If you get a wrong guy, like your teammate, there will be a long

vibration. And you will lose one point.”

“If you get hit by anyone, there will be several vibrations and the sound of alarm. And you will lose one hit point.”

“After a player is hit, there will three seconds ‘frozen time’. During these three seconds you won’t be able to fire your gun nor your can be killed. This is the best time for you to escape the enemy fire. ”

**【Make sure everyone understand the sound of being “unfrozen”. 】**

“Everyone’s HP can be setup by remote control. From 1 to 99. We used to use 3, which means if someone got hit 3 times he will be pronounced “dead” and his equipment will be locked.”

When you are “dead”, leave the “battlefield”, get back to the rest area and relax while waiting for the next game.

**【Show how to shoot, and let everyone shoot the facing “enemy”. 】**

**【End the session 】**

“Everything is ok? Any question?”

**【Answer the question, if people still have some 】**

“During the game, we have 3 rules to obey. **【make it very clear to the players 】**

- 1、 No physical contact, especially fighting with your “enemy”
- 2、 Do not unplug the data cable.
- 3、 Take care of your gun. Make sure it is not blocked by dust or earth.

Let's go!"
